

Athletics

Athletics is a collection of sporting events that involve **running**, **jumping** and **throwing** competitive skills. The most common types of athletics competitions are track and field, road running, cross country running, and race walking.

The name is derived from the Greek word "Athlon", meaning "contest". Organized athletics are traced back to the Ancient Olympic Games from 776 BC.

Athletics

PROBLEM:

How to choose the best investments in sports sponsorship among athletes who compete professionally in competitions worldwide?

IAAF

International Association of Athletics Federations

The International Association of Athletics Federations (IAAF) is the **international governing body for the sport of athletics**. Founded in 1912 and headquartered in Monaco since 1993, the IAAF has 215 member nations and territories.

IAAF has undertaken to create a **global Ranking System** where athletes score points based on a combination of result and place depending on the level of the competition in which the result is achieved. The ranking is then based on their average score over a certain number of competitions in a defined period of time.

IAAF World Ranking

Project walkthrough

- Webscrap men's world ranking from IAAF website
 - Men's overall ranking (all events) 121 pages each
 - Scores from the last week of each month 96,000 scores
 - Selenium
 - BeautifulSoup
- Loop for storing all the relevant information into a data frame
 - Pandas
 - Numpy
- Data cleansing
 - Parse the date of birth
 - Events list (count)
 - Variables creation (age, ranking date)
- Descriptive Analysis
 - Matplotlib
 - Group by country and by athlete

Scores - Countries

^{*} As of the last week of August/2019

Scores – Athletes

Next steps

- Expand the analysis for women's scores
- Expand analysis for weekly results
- Segment the analysis by event
- Enhance the dataset with athletes' photos and individual results
- Enhance the dataset with external information, for deeper exploration
